

# Orchid

Orchid is a simple tool to generate ORCID iD links in various formats. Mainly inspired by LaTeX's `orcidlink` package.

## Formats

### Logo

- 
-  John Doe
- John Doe 

### Compact

- 0000-0000-0000-0000
- 0000-0000-0000-0000 John Doe
- John Doe 0000-0000-0000-0000

### Full

- <https://orcid.org/0000-0000-0000-0000>
- <https://orcid.org/0000-0000-0000-0000> John Doe
- John Doe <https://orcid.org/0000-0000-0000-0000>

## Customizing the logo icon

To customize the logo icon you can just overwrite the `logo-icon` variable, for example:

```
#import "/orchid/lib.typ": * // instead of #import "..." as orchid
#set page(
  height: 7em,
  width: 10em,
)

#let my-id = "0000-0000-0000-0000"

- Default: #generate-link(my-id)
#let logo-icon = box(logo, width: 1.5em, height: 1.5em, baseline: 0.5em)
- Overwritten: #generate-link(my-id, icon: logo-icon)
```

- Default: 
- Overwritten:
